Mayfair Chair
Designed by Christophe Pillet, 2008
Cat. Chairs
Mayfair Chair
Designer: Christophe Pillet
Year: 2008

Mayfair reception chair reflects the same curvaceous form as the easy chair, but its slim metal legs make it lighter. Its distinctive design is both practical and comfortable, making Mayfair the perfect chair for sitting at a table, be it in the home or in restaurants and other hospitality settings.

Developed by Tacchini in Italy

Dimensions (cm)
Cod. OMAY57

W 57 D 56 H 80 cm
H seat 45,5 cm

Non-removable covers

CAD Files:
3D (.dwg, .3ds)

Materials description

Internal frame: cold foam with metal inserts.

Padding: differentiated - density polyurethane foam.

Base: tubular metal base Ø 16 mm powder-coated painted.

Upholstery: non removable cover.

Painted base

T02 White RAL 9016
T07 Black RAL 9011
T08 Brown RAL 8019
T04 Bronze
Suggested upholsteries

- Leather
- Divina
- Lars
- Trifolium
- Erika
- Dianella

Materials informations

Polyurethane

Flexible expanded polyurethane is a solid elastic polymeric material with open cell structure. It is a non-toxic material and above all free from ozone-damaging components. Production and processing of the polyurethane we use meet the objectives of the new policy of ensuring the protection of human health and of the environment. We focus in particular on the choice and use of the types of density of polyurethane suitable for preserving over the years the features of load capacity, elasticity and resilience. For products used in public spaces flame-retardant expanded polyurethane is chosen, tested and certified according to international regulations.

Metal

The need to combine complex yet lightweight shapes with resistant materials necessarily involves the use of metals such as steel and aluminium. Products in polyurethane foam are made with an inner steel frame for adding strength to the structure. The bases are in tubular metal which can be chromed with a gloss or satin finish or painted with epoxy powders.

Foam

Similar to polyurethane, foam is used for moulding products with special and organic shapes. It is a material which is highly resistant to ageing and flames. Its appearance at the edges is clean, compact. All products made with a foam structure offer a solution with extraordinary comfort.

Recyclability

All Mayfair Chair elements are 100% recyclable when fully separated. Tacchini undertakes on-going research and development, with efforts made to introduce products which are a perfect combination of function and safety without jeopardizing the final design of the same articles. During production attempts are made to minimize noise and emission levels and to reduce rejects as far as possible. All the single materials which make up the production process, once disassembled, can be reused several times, maintaining a high quality standard.

Packaging

Mayfair Chair element is dispatched already assembled. It is protected by tissue paper and cellophane to protect the covering from dust and direct contact with the cardboard. The product is packed in rigid cardboard boxes suitable for world export. Manufacture of the packaging observes the criteria for recovery both as recycling and energy recovery and composting.

Once a product reaches the end of its life cycle it has to be eliminated.
