Montevideo Chair
Designed by Claesson Koivisto Rune, 2008

With its slender legs and soft shapes, the Montevideo chair certainly does not trade in comfort for elegance. The soft foam cushion envelops the body, ensuring perfect relaxation. The removable cover makes it particularly handy in any context of use, always with its own special character.

Developed by Tacchini in Italy

Dimensions (cm)
Cod. OMON54

W 54 D 62 H 80 cm
H seat 47 cm

Removable fabric and leather covers

Materials description

Internal frame: birch plywood 18 mm thick.

Padding: differentiated - density polyurethane foam.

Base: tubular metal base Ø 16 mm, powder-coated painted.

Upholstery: fully removable cover.

Painted base

- T02 RAL 9016 White
- T07 RAL 9011 Black
- T08 RAL 8019 Brown
- T93 Metalgrey

Suggested upholsteries

- Eranthe
- Erodium
- Lunaria
- Aniline Leather
- Super Leather
- Trifolium
Recyclability

All Montevideo Chair elements are 100% recyclable when fully separated. Tacchini undertakes on-going research and development, with efforts made to introduce products which are a perfect combination of function and safety without jeopardizing the final design of the same articles. During production attempts are made to minimize noise and emission levels and to reduce rejects as far as possible. All the single materials which make up the production process, once disassembled, can be reused several times, maintaining a high quality standard.

Packaging

Montevideo Chair element is dispatched already assembled. It is protected by tissue paper and cellophane to protect the covering from dust and direct contact with the cardboard. The product is packed in rigid cardboard boxes suitable for world export. Manufacture of the packaging observes the criteria for recovery both as recycling and energy recovery and composting.

Once a product reaches the end of its life cycle it has to be eliminated.

Polyurethane

Flexible expanded polyurethane is a solid elastic polymeric material with open cell structure. It is a non-toxic material and above all free from ozone-damaging components. Production and processing of the polyurethane we use meet the objectives of the new policy of ensuring the protection of human health and of the environment. We focus in particular on the choice and use of the types of density of polyurethane suitable for preserving over the years the features of load capacity, elasticity and resilience. For products used in public spaces flame-retardant expanded polyurethane is chosen, tested and certified according to international regulations.

Wood

Wood is a renewable raw material. All products derived from wood, such as for example plywood, have the advantage of being able to be machined more easily than wood and do not deform. The timber we use – solid or plywood – comes mainly from European and Russian forests and is seasoned to specific values of humidity with tests. Most of the structures of the products in the collection have a frame in solid pine or ash, or in beech or poplar plywood.

Metal

The need to combine complex yet lightweight shapes with resistant materials necessarily involves the use of metals such as steel and aluminium. Products in polyurethane foam are made with an inner steel frame for adding strength to the structure. The bases are in tubular metal which can be chromed with a gloss or satin finish or painted with epoxy powders.
Claesson Koivisto Rune

The Claesson Koivisto Rune studio was established in 1995 as a multidisciplinary architecture and design workshop, in line with the classic Scandinavian tradition, but with the aim of exploring new concepts, and pursuing the values of simplicity and innovation. The three Swedes have created architectural designs throughout the world and in every sector, from homes to restaurants, retail to executive buildings, as well as furniture ranges for numerous major international firms.
