Spin
Designer: Claesson Koivisto Rune
Year: 2010

Spin is a family of ottomans which resumes a technique such as “random” stitching, already applied in the Doodle chairs by designers Claesson Koivisto Rune, that traces soft and playful whirls with an almost hypnotic effect. The stitches characterize the generous, rounded shapes of these soft furnishings, available in different sizes and colours.

Developed by Tacchini in Italy

Materials description

Internal frame: birch plywood 15 mm + polystyrene 220 mm.

Padding: differentiated - density polyurethane foam.

Base: polypropylene glides col. black Ø 30 mm, H 13 mm.

Stitches

- White
- Beige
- Red
- Blue
- Black

Suggested upholsteries

- Divina
- Thesium
- Early
- Silene
Recyclability
All Spin elements are 100% recyclable when fully separated. Tacchini undertakes on-going research and development, with efforts made to introduce products which are a perfect combination of function and safety without jeopardizing the final design of the same articles. During production attempts are made to minimize noise and emission levels and to reduce rejects as far as possible. All the single materials which make up the production process, once disassembled, can be reused several times, maintaining a high quality standard.

Packaging
Spin element is dispatched already assembled. It is protected by tissue paper and cellophane to protect the covering from dust and direct contact with the cardboard. The product is packed in rigid cardboard boxes suitable for world export. Manufacture of the packaging observes the criteria for recovery both as recycling and energy recovery and composting.

Polyurethane
Flexible expanded polyurethane is a solid elastic polymeric material with open cell structure. It is a non-toxic material and above all free from ozone-damaging components. Production and processing of the polyurethane we use meet the objectives of the new policy of ensuring the protection of human health and of the environment. We focus in particular on the choice and use of the types of density of polyurethane suitable for preserving over the years the features of load capacity, elasticity and resilience. For products used in public spaces flame-retardant expanded polyurethane is chosen, tested and certified according to international regulations.

Wood
Wood is a renewable raw material. All products derived from wood, such as for example plywood, have the advantage of being able to be machined more easily than wood and do not deform. The timber we use – solid or plywood – comes mainly from European and Russian forests and is seasoned to specific values of humidity with tests. Most of the structures of the products in the collection have a frame in solid pine or ash, or in beech or poplar plywood.
The Claesson Koivisto Rune studio was established in 1995 as a multidisciplinary architecture and design workshop, in line with the classic Scandinavian tradition, but with the aim of exploring new concepts, and pursuing the values of simplicity and innovation. The three Swedes have created architectural designs throughout the world and in every sector, from homes to restaurants, retail to executive buildings, as well as furniture ranges for numerous major international firms.
